Cleaning Your ActivPanel

Elements Series

The following is a procedure to be used in those circumstances where a deep cleaning of the ActivPanel cover glass is required.

Step 1:

Switch off your ActivPanel and disconnect the power cable.

Step 2:

Lightly apply 90% ethanol to a 100% cotton or microfiber cloth (we recommend spraying onto the cloth). Do not apply liquids directly to the ActivPanel.

Step 3:

In a single direction, wipe down the cover glass of the ActivPanel, making sure to avoid the narrow sides of the touch bezel. Do not apply excessive pressure to the glass.

Step 4:

After the application, dry the cover glass with a clean and dry 100% cotton or microfiber cloth.

Note: Please follow all safety and handling instructions listed with the cleaning solution, and keep out of reach of children.

For schools conducting a deep clean of their facilities, please follow these steps to protect your ActivPanels in advance of chemicals being sprayed onto surfaces.

Step 1:

Switch off your ActivPanel and disconnect the power cable.

Step 2:

Cover all inputs/outputs of the ActivPanel to prevent damage to internal electronic components.

Cover all ventilation holes.

Remember to remove any covering before use!

Please be advised:

Do not use ammonia-based cleaners directly on the ActivPanel.

Do not apply liquids directly to the ActivPanel.

Do not let any liquid remain on the ActivPanel.

Please be advised:

When wiping the ActivPanel, use a 100% cotton or microfiber cloth.

As always, employ good personal hygiene practices of washing hands before and after using the ActivPanel.
